Our products fill the need of our clients who are unable to operate and control everyday electronic devices or telephones. Many of our clients have spinal cord injuries, ALS, as well as other physical and debilitating injuries. Our products allow them to use voice commands to control media devices (TV/DVD/VCE, Stereos, CD players, etc.), telephone, automatic door openers, lights, security systems, appliances, hospital beds, and much more! All of the commands can be custom created to fit the client's needs.

The **Communicator Series** offers a complete wireless voice activated telephone solution, including the ability to dial a phone call, just by speaking the name of the individual you wish to contact. You can also call by speaking the digits you wish to dial. It is available with both the headset and speakerphone option.

The **Communicator Basic** plugs into your computer via USB and once the software is installed, allows you to dial by speaking the name of the person you wish to call or by speaking individual digits. It also gives you the ability to use voice commands to pick up call waiting, access multiple lines, control volume and mute functionality, redial, and much more! The wireless telephone headset also doubles as a microphone for your computer for use with any voice dictation software (Dragon, Viavoice, etc.). **Pricing starts at \$425**

The **Communicator Complete** gives you the same functionality of the BASIC but also provides a control box for those who do not have a computer. All contact name entry is done via a Palm Pilot device so there is no need for a monitor, mouse, or keyboard.

**Pricing starts at \$1500**

The **Powerhouse Series** offers complete voice activated telephone functionality plus much more. Our **Powerhouse** line offers you the ability to control a single room or your entire home all by using voice commands that **you** specify. If it can be controlled by a remote or it is plugged into your home, we can most likely control it by voice! It is available with both the headset and speakerphone option.

The **Powerhouse Roommate** system is perfect for the individual who wants to have a fully voice activated telephone plus voice control over devices in a single room.

**Powerhouse Roommate** allows you to control lights, small appliances (i.e. fans, call chimes), hospital beds, automatic door openers, and countless other devices. You can also voice control infrared for voice control over entertainment devices such as TV, DVD, VCR, and stereos as well. The system is easy to setup and customize the voice commands that are to your liking. **Pricing starts at \$2500**

The **Powerhouse Home** is a complete home solution for someone who wants all of the functionality of the **Powerhouse Roommate** throughout the entire home. Voice automation options with the **Powerhouse Home** are virtually unlimited. **Pricing starts at \$4500**

**All products are available with speakerphone options**
